

# Accounts not activated

Path to function: *Accounts > Accounts not activated*

Performs a pre-set search for accounts where the user has not yet set a password and / or confirmed their email address.

If you select one or more accounts you can use the [Actions button](#) to send the users a new activation code. This action is also available from an [account's details page](#).

You can get more control over the list of accounts you see by using [search](#), which will allow you to add criteria for things like creation date to the non-activated search option.
