

How to see what your users have done

The [auditing](#) function via *Statistics > Auditing* will tell you about the important actions that have happened across your organisation.

For more detailed information about an individual account you can look at the activity tab on that account's detail page. You can jump to the account's details page from the audit page by clicking the account username.

The screenshot shows the OpenAthens user interface. At the top, there's a navigation bar with 'Accounts', 'Resources', 'Statistics', 'Preferences', and 'Management'. Below this, the user 'spudzz' is editing the account 'spudbjohnson002'. The account details include the name 'Bobby Johnson', a personal account type, and a 'active' status. A sidebar on the left shows account metadata: created on 18 April 2018, modified on 23 May 2018 at 13:31, expires on 14 October 2019, and is part of the 'Potato Inc.' organisation. The main area is the 'Activity' tab, which displays a list of actions. The actions include password changes, a password reset request, and an email address change. The most recent activity is a password change by 'spudbjohnson002' at 15:36 yesterday. The page also includes a 'Privacy Policy' link and a copyright notice for Eduaserv.

This view will include things such as changes to the email address or password alongside things that appear at the organisation level.
