

How to send end-users to a webpage after activation

When an end-user follows an activation link they can choose their own password. This is usually the end of their journey however there is a facility for you to specify a web address to forward them on to once they have set the password - perhaps to your library information page or portal.

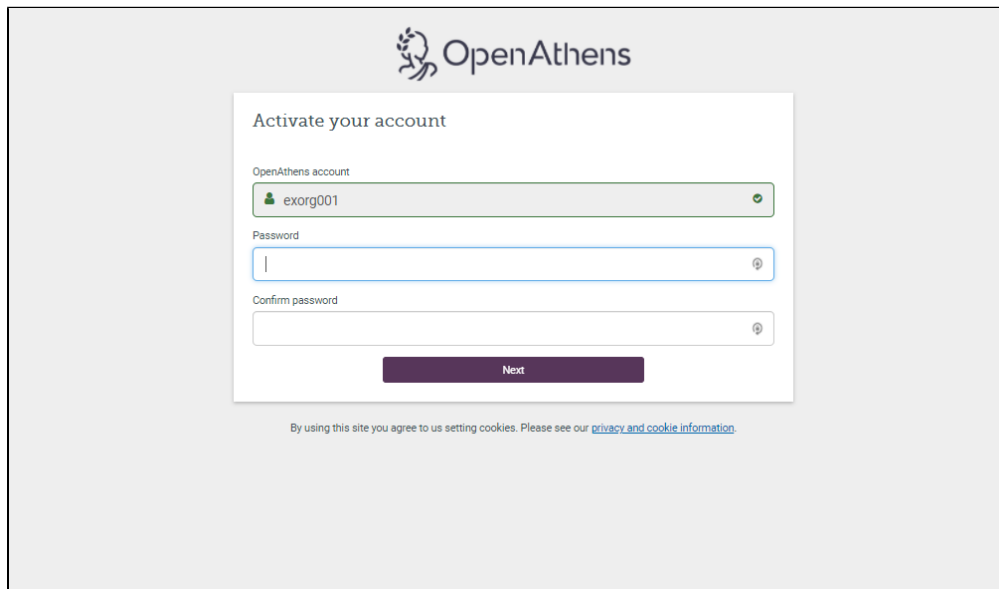

To enable this, you need to update your [domain preferences](#):

1. Go to **Preferences > Domain** and find the after account activation section
2. Add a URL
3. Save

Now when an end-user activates their account they will see a continue button in the success dialogue and this button will take them to the address you specified.

The screenshot shows the OpenAthens logo at the top center. Below it is a white form titled "Activate your account". The form contains three input fields: "OpenAthens account" with the value "exorg001", "Password" (empty), and "Confirm password" (empty). Each field has a small circular icon on the right side. Below the fields is a dark purple button labeled "Next". At the bottom of the form, there is a small line of text: "By using this site you agree to us setting cookies. Please see our [privacy and cookie information](#)."
