

Add the EPEL repository to the runtime

If you are installing on your own server, you will need the Extra Packages for Enterprise Linux (EPEL).

Centos 6:

```
sudo yum install http://dl.fedoraproject.org/pub/epel/6/x86_64/epel-release-6-8.noarch.rpm
```

Centos 7:

```
yum install epel-release
```

[Return to the configuring Yum page](#) to continue your installation of the runtime.
